

# Henry Perkins — WordPress Support Engineer

PHP · JavaScript · Gutenberg · REST/HTTP/DNS · Root-cause debugging · Customer communication

Chicago, IL · [hperkins@gmail.com](mailto:hperkins@gmail.com) · [hperkins.blog](https://hperkins.blog) · [GitHub](#) · [WordPress profile](#)

**TARGET: SUPPORT ENGINEER** — WordPress support, site delivery, root-cause debugging, and clear handoff between customers and engineering.

## WORDPRESS.COM SUPPORT

---

**Automattic — Happiness Engineer** | Remote · Oct–Nov 2012

Resolved WordPress.com user issues across publishing, site configuration, billing, domains, and DNS; wrote clear troubleshooting that addressed root causes rather than symptoms. Turned recurring problems into documentation, bug reports, and reproducible details for product and engineering.

## NAMED CLIENT DELIVERY

---

**Independent Technology Consultant** | Oct 2022–Present · selected delivery in 2026

**LIVE** — Delivered [DJ Lee & Voices of Judah](#) from discovery through launch: a booking-first, one-screen flow rebuilt from React as static JavaScript on one Cloudflare Worker, with a server-side `/api/booking` endpoint configured to route requests to the ministry inboxes and no form vendor in the path.

Made delivery and iteration inspectable through the [shipped second design](#) and the [prior public build](#).

## PRODUCTION ROOT-CAUSE DEBUGGING

---

**HPerkins Tokens — WordPress block theme** | production incident · Jul 2026

**SHIPPED** — Reproduced a production-only accessibility regression: Page Optimize reversed local stylesheet order; Assembler's unresolved **theme-4** token invalidated the outline shorthand, and equal-specificity rules left buttons without visible keyboard focus rings. Fixed the cascade in [commit c5dc3a1](#) and added a browser regression that replays production ordering before asserting the 3px ring; released as [v0.3.52](#).

## UPSTREAM WORDPRESS CONTRIBUTION RECORD

---

**MERGED** — [WordPress/ai PR #501](#): authored Content Resizing and Title Generation experiment documentation; merged May 18, 2026.

**REPORTED · FIX SHIPPED** — [Issue #529](#): reported a Guidelines content-type defect; the maintainer fix in [PR #593](#) merged May 20 and shipped in WordPress AI Plugin 1.0.1.

**OPEN** — [Issue #732](#): reported the custom-transport request-logging gap; the provider-agnostic fix in [PR #757](#) remains open as of Jul 21, 2026.

## TECHNICAL PROOF

---

**AI Provider for Codex — Author** | independent WordPress plugin

**SHIPPED** — [v2.1](#) (Jul 2, 2026; [commit 2827bb5](#)): WordPress AI Client provider for Codex text and capability-gated image generation, using a localhost sidecar and isolated per-user runtime state. Released independently; not merged into WordPress/ai.

**HPerkins Tokens — Author** | WordPress theme

**LIVE + SHIPPED** — [v0.3.52](#) at [hperkins.blog](https://hperkins.blog): theme.json tokens, Gutenberg patterns, accessible focus states, and browser verification against production CSS ordering.

## SKILLS & CAREER CONTEXT

---

**WordPress:** PHP, JavaScript, Gutenberg, REST API, WP-CLI · **Support:** HTTP, DNS, CSS cascade, browser debugging, escalation triage, customer communication · **Tooling:** Git/GitHub, GitHub Actions, Plugin Check, PHPStan, Cloudflare Workers.

**Earlier customer and operations roles:** Starbucks Shift Supervisor (2019–2022); Sodexo Starbucks Manager (2018–2019); Clinique Consultant (2015–2017); PageLines Developer Community Manager (2012); Micro Center Customer Service/Sales (2009–2012).
